Allowable Subject Matter

1. Claims 21-26, 28-46 and 48-60 are allowed.
2. In regard to claims 21-26, 28, 29, 40-46, 48, 49 and 60 the cited prior art of record fails to teach or suggest the respective claim language when considered as a whole, specifically subdividing the 2D image plane into a plurality of sub-planes; for each of the plurality of sub-planes, casting four rays from the four corners of the sub-plane and estimating a pixel value at each corner; calculating a maximum pixel value variation within the sub-plane; and recursively subdividing the sub-plane into multiple child sub-planes of smaller sizes by casting a ray from the center of the sub-plane until the maximum pixel value variation of the sub-plane is below a predefined imaging error threshold.
3. In regard to claims 30-32 and 50-52 the cited prior art of record fails to teach or suggest the respective claim language when considered as a whole, specifically identifying a largest sub-volume along the ray path and its corresponding maximum and minimum data values; checking if the opacity transfer function varies monotonically between the maximum and minimum scalar field values; if the function does not vary monotonically, recursively identifying a smaller sub-volume along the ray path and its corresponding maximum and minimum data values; and checking if the opacity transfer function varies monotonically between the maximum and minimum scalar field values of the smaller sub-volume; and if the function does vary monotonically, calculating the amount of ray energy reflected by the sub-volume during its interaction with the ray.

4. In regard to claims 33-39 and 53-59 the cited prior art of record fails to teach or suggest the respective claim language when considered as a whole, specifically estimating a maximum energy differential of the sub-volume; comparing the maximum energy differential against a predefined energy error threshold; if the maximum energy differential is above the predefined energy error threshold, recursively; selecting a smaller sub-volume along the ray path; and estimating a new maximum energy differential of the smaller sub-volume; and if the maximum energy differential is below the predefined energy error threshold, calculating the amount of ray energy reflected by the sub-volume using the illumination model.
